

Estimating Earnings Adjustment Frictions: Method and Evidence from the Social Security Earnings Test

Disclosure Statement – Daniel W. Sacks

This research was undertaken when the author was supported by a National Science Foundation Graduate Research Fellowship.

Funding for this research was received from the National Institutes of Health through grant #1R03 AG043039-01, from support from the U.S. Social Security Administration through grant #5RRC08098400-05-00 to the National Bureau of Economic Research (NBER) as part of the Social Security Administration Retirement Research Consortium.

This research makes use of confidential administrative data from the Social Security Administration (SSA). SSA reviewed a draft of the paper for disclosure of personally-identifiable information before it was circulated.

This research makes use of confidential administrative data from the U.S. Census. Census reviewed our results using Census data for disclosure of personally-identifiable information before releasing them.

The author declares that he has no other relevant or material financial interests that relate to the research described in this paper.

IRB approval was not obtained for this study as the nature of the data used for the study renders the project exempt.
